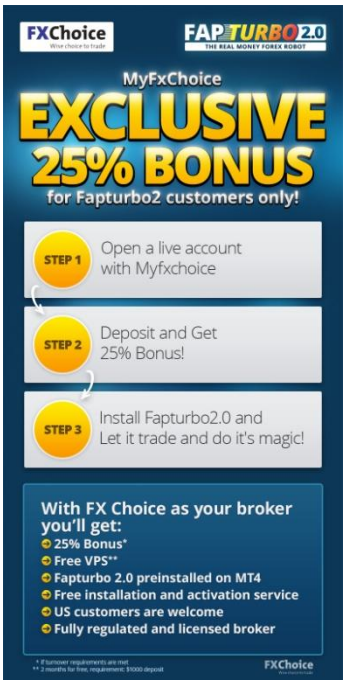
BTC FAPT2.3 PREMIUM

It's with great pride that we announce the release of our latest **BTC FAPT2.3 Premium** robot, specifically built and optimized for **BITCOIN**, the most popular crypto-currency to have hit the markets in recent years and is all set to become one of the fastest growing investment vehicles you have ever seen!

How to qualify for Premium Trading?

Our BTC FAPT2.3 version is optimized and fine tuned for our preferred brokers, **MyFxChoice** and **Tallinex**. To join our list of Premium members, you need to open and fund a live FapTurbo account with MyFxChoice here (with an equity of at least $500 or more): http://fapturbo2.com/myfxchoice



FxChoice is also offering a very attractive 25% bonus for our FapTurbo2 members only, plus free VPS (conditions apply). See the bonus offer on the right here.

Besides MyFxChoice, we have also joined hands to include **TALLINEX** as our second-best recommended broker for FAPT2. We wanted to give our customers a little more choice for brokers with our latest FAPT2 robots. So, if you wish to try out FAPT2 on **Tallinex**, please be sure to sign up through this link here: http://fapturbo2.com/tallinex

Tallinex is also offering an excellent 100% bonus, once again for our FapTurbo2 members only. See their bonus offer here on the left.

INTRODUCTION TO BITCOIN FAPT2

As you may well know, we at FapTurbo2.com never cease to strive to improve our robots. It is important for us to ensure that our BTC FAPT2 series stays on top of the market, especially with recent volatility in the Bitcoin markets. With that in mind, we are very pleased to announce the release of the latest **BTC FAPT2.3 Premium**, which significantly outperforms its predecessor in more ways than one. From Jan'13 to Mar'15, this latest version shows a profit in excess of **+$174,400 (MTS mode)** and **+$150,045 (Scalper mode)** with 0.1 lots on BTCUSD alone! This is a VAST improvement over the results of the previous BTC FAPT version, especially with the Scalper mode! You may compare the results of BTC FAPT2.3 with those of the previous versions.

To get our latest BTC FAPT2.3 Premium, all you need to do is ensure that you have the latest FxChoice/Tallinex metatrader installed, which always come preinstalled with our latest FapTurbo2 robot versions. Please check with your broker and download & re/install the latest MT4 from their website directly.

IMPORTANT NOTES

Irrespective of whether you are new to our FapTurbo family or not, the very first thing you MUST do is to make sure you read the general instructions in the main FapTurbo v2.3 guide (which apply to both BTC & FAPTv2.3 Premium). You can also find and refer to the main guide on the Downloads page in our Members Area here: **http://fapturbo2.com/members**

We cannot stress this enough! PLEASE make sure you read through this guide thoroughly, before attempting to run ANY of our BTC & FapTurbo2 robots!

NOTE1: WHERE DO I FIND BITCOIN IN MY MT4? In FxChoice, the previous price feed was named BITCOIN but ever since MtGox's closure, that feed is no longer active. So, please make sure you are using the correct **BTCUSD** feed, not the previous BITCOIN one. In Tallinex, the pair name is BTCUSDecn.

In order to be able to trade on the new bitcoin feeds, you must refresh your MT4's Market Watch window. This has been explained in our videos before; simply right-click within **Market Watch**, then click **Show All** and you should now see BTCUSD listed in there, after which you will be able to open new chart windows for the BTC FAPT2.3 robot to run on.

NOTE2 - LOT SIZES ON BITCOIN: Please note that the lot contract size on BTCUSD is different from that of regular forex pairs… i.e., **1 lot on the BTCUSD feeds is equivalent to 0.01 standard lots on regular forex pairs** (this applies to both FxChoice AND Tallinex). This is actually an advantage since it allows you to be able to trade on BTCUSD with much lesser risk than you would on the other pairs.

To recap: **1 lot on BTCUSD feed = 0.01 lots on regular pairs (e.g., EURUSD, etc)**

For e.g., if you wish to trade with the effect of standard 0.1 lots on BTCUSD, then simply set MTScalp_Lots to 10.0

NOTE3 ABOUT -1 DEFAULT VALUES: For most parameters in our BTC & FAPT2 series, you will notice that the default value is -1. This value means that the robot will internally choose the best, optimum value for each setting based on which pair it is trading on. You do NOT have to modify this value; unless you know what you are doing, it's best to leave the important parameters at their default values of -1.

IMPORTANT NOTE about PREVIOUS TRADES: Please be advised that the MagicNumbers in BTC FAPTv2.3 Premium are different from those in the previous versions, so if you have any existing trades that were opened by the older BTC FAPT2 robots, it would be best for you to CLOSE those trades before replacing the previous versions with our latest BTCv2.3 Premium robots. If you don't, then the existing trades will be orphaned and will NOT be monitored by BTCv2.3 (unless you were to change the MagicNum of the newer versions to match those of the older robots, which is not recommended unless you know what you're doing). So, for the sake of simplicity, please close any older trades before proceeding with BTC & FAPTv2.3 Premium.

LIST OF IMPROVEMENTS

- **TRADE DIRECTION**: This is a new feature that allows you, as well as us at FapTurbo2, to exercise better control over the general trend direction of the trades allowed by the robot, i.e., this parameter determines if the robot should allow only Buy trades or only Sell trades or BOTH. By default, the robot checks with our servers to see which trade direction is allowed… usually, trades are allowed in both directions, i.e., Buy and Sell. More details about this feature later in this manual…

- **DOWNLOAD LATEST SETTINGS**: Ever since version 2.2 onwards, our BTC robots have the feature to automatically download and apply the very latest optimized settings directly from our servers. In BTC FAPT2, this applies to BOTH the MTS mode as well as the Scalper mode. This is achieved with the new parameter **DownloadLatestSettings** which is true by default; if you switch off this parameter to false, the Bitcoin robot will switch to its basic unoptimized settings. As long as this parameter remains true, you won't have to worry about manually applying new settings and keeping up-to-date with the markets.

  We've seen how updating the robot's settings after every few months works well to help our robots stay on top of changing market trends. So, we will make it a point to ensure that our robots' presets are updated regularly. The beauty of this version is that you won't ever have to apply any of the updated settings manually; whenever we announce the release of new settings in the future, all you have to do is simply restart your MT4, and the robots will automatically download and apply the latest settings! (as long as DownloadLatestSettings remains True)

- **FAIL-SAFE for LATEST DOWNLOADED PRESETS**: The robot has a backup / fail-safe mechanism built into it to ensure that it's not left hanging high and dry IF something should prevent it from downloading the latest MTS/Scalper settings for Bitcoin from our servers due to any unforeseen reason. The first time you run the robot on a pair and as soon as it connects successfully to our server, it will download the latest settings AND immediately create a backup. So, the next time around, if there's any connection problem or issue that prevents the robot from grabbing the latest settings, it will attempt to read the recent backup and obtain the most recent settings from there. In the unlikely event that BOTH attempts fail, then the robot will abort and report the issue on the chart as well as in the Experts tab.

- **INCREASED PROFITS** with lower drawdowns, especially in Scalper mode! The scalper in BTC FAPT2.3 is far superior in performance to the previous versions, and with a super-low drawdown as well as a better Profit/Loss setting that you can take full advantage of, especially if you prefer to let the robot scalp. Infact, the Scalper mode on Bitcoin has even surpassed profits from the MTS mode so far this year. But please remember, you MUST be more patient with the MTS mode… it will not trade as often as the Scalper does!

- **TRAILING STOP**: As promised, we've incorporated a **TrailingStop** option along with the **Breakeven** feature, which allows you to grab potential profits as soon as possible and save profitable trades from falling into a loss, incase the market price were to turn against a favorable trading direction. These features have been explained later in this manual.

- **Additional parameters for Filters** : For those of you who've toyed around with the entry filters such as FilterMA (Moving Average) and TrendFilter, you will be glad to know that we've given you even more flexibility to change the timeframe of the indicators that these filters refer to internally, which helps to filter out bad entry signals. For example, if you're running BTC FAPTv2.3 on an M15 chart, you can actually set the FilterMA to look at the Moving Average on H1 or H4 internally, so that the robot will 'see' a more accurate representation of the current trend from the broader perspective of a larger timeframe and hence, be able to take a better decision if the current prices break through that slower MA or not. For the purpose of troubleshooting, we've also included detailed info about the state of all Filters, which can be displayed by switching WriteDebugLog to True. The FilterMA and TrendFilters have been described in detail in the main FAPT2.3 manual, so please take the time to read through that manual thoroughly.

- **Automatic MaxSpread** (-1) : For those of you who have traded on both FxChoice and Tallinex, you will notice that the difference in spreads can be quite obvious. Higher spreads mean lesser trades. So, we sought to improve this situation by setting the MaxSpread to -1, thereby allowing the robot to automatically set the best MaxSpread based on the broker you are running the robot on. By default, the robot will now set MaxSpread to $10 for both MTS and Scalper modes on FxChoice and Tallinex.

- **Improved WatchLevels in StealthMode** : In other words, the robot will keep a

closer watch on a trade especially around the T/P and S/L levels when in StealthMode.

- **Cosmetic changes**: The new DownloadLatestSettings switch along with the latest Preset names will be displayed on the chart of each pair, so you can easily see the change in the preset name and values whenever we announce an update. Also, TradeMonday & Friday are mentioned for your convenience. TrailingStop / BreakEvenOffset info have also been added to the robot's chart display (i.e., if MTScalp_BreakevenOrTrailingStop is either set to 1 or 2). And as mentioned earlier, detailed Filter info can be displayed along with the robot's MagicNumber when WriteDebugLog is set to true.

PERFORMANCE RESULTS OF BTC FAPT2.3 PREMIUM

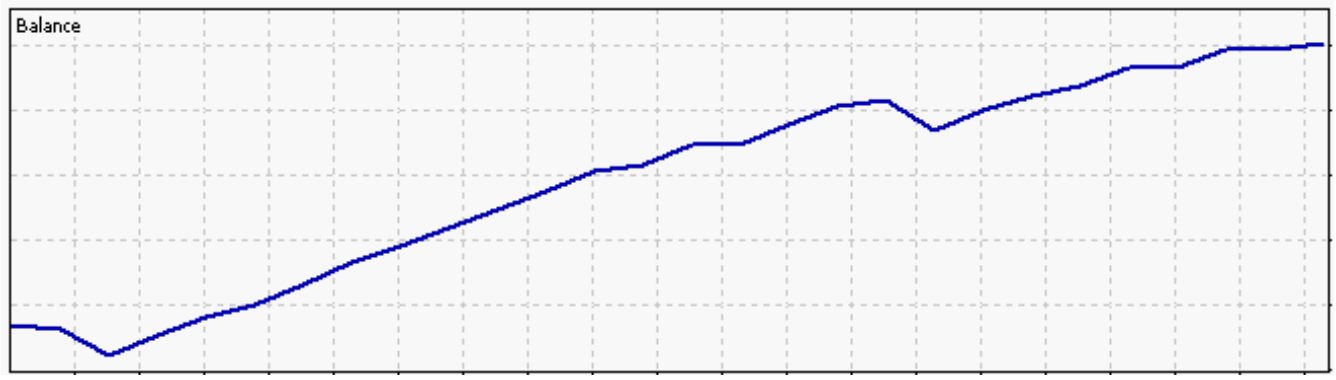
BTC FAPT2.3 Mode	Min Balance required	Lot Size	Max Spread ($)	Jan'13 to Mar'15						
				Profit	Trades	Profit Factor	Exp Payoff	Drawdown (DD)	DD %	Wins (Win%)
BTC MTS	$10k	10	$10	**$174,439**	65	2.12	260.84	$3,069.60	13.69%	40 (61.54%)
BTC Scalper	$10k	10	$9.5	**$150,045**	107	10.57	263.62	$1,212.80	7.31%	94 (88.01%)

Please see the equity performance graphs of our latest BTC FAPT2.3 version below. Do keep in mind that, although we started our tests with $10k on Bitcoin at 10.0 lots, you can start with a lower balance such as $1000-$5000 but with lower lot sizes between 1 to 5 lots at first. Even though we recommend $500 to get started with our Premium robots, honestly, we see no point in trading on Bitcoin on anything less than $1000 because you will not be able to take full advantage of the robot's trading capabilities on this particular pair.

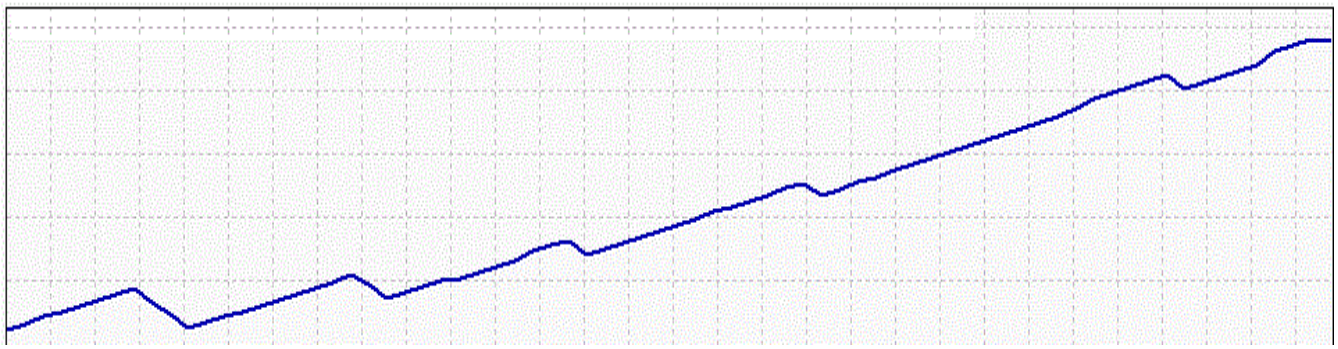
BTC FAPT2.3 PREMIUM Equity Charts

(from Jan ’13 to Mar’15)

BTC/USD – Medium-Term Strategy (MTS): Profit = $174.44k



BTC/USD – Scalper mode: Profit = $150.05k



Support

As always, if you are a Premium member and if you have any questions about BTC or FAPT2 Premium or any related technical queries, please feel free to contact us at:

premium@fapturbo2.com

GENERAL FEATURES of BTC FAPT2

Note: For the sake of brevity, we will use the term 'BTC FAPT2' in general to refer to all versions of our Bitcoin premium robot from version 2.0 and above.

BTC FAPT2 shares many of the best features that we incorporated into FAPT2 Premium. The difference is that BTC FAPT2 does not have the long-term FAP strategy (since the latter is meant to run on EURUSD only, not Bitcoin). However, BTC FAPT2 comes with both the Medium-Term strategy (MTS) as well as a Scalper mode, in which the latter's T/P and S/L are smaller than in the MTS, but the results are just as interesting. Our Bitcoin version has the same advantages found in FAPT2 Premium. For a list of the features common to both Premium robots, please see the main FAPT2 Premium guide.

TradeDirection: As explained earlier, this is a feature that allows you to control the direction of the robot's trades, i.e., if the robot should allow only Buy trades or only Sell trades or BOTH. The default value is -2, which means the robot will check with the server to see which trade direction is allowed. In most cases, the robot will be allowed to trade in either direction, which is equivalent to the value 2. These are the allowed values for TradeDirection (in descending order):

2 = Both Buys and Sells are allowed

1 = Buys only

0 = NO trading!

-1 = Sells only

-2 (default) = automatic check with server (most often, will receive green signal to trade in both directions, in other words, default behavior will be similar to 2)

This information will be obtained from our server whenever the robot checks with our servers for the latest settings and instructions.

- **MIXED TRADING MODES**: BTC FAPT2 Premium can be switched between the MTS and Scalper mode (UseMediumTermStrategy=false)

- **DIFFERENT T/P & S/L FOR EACH MODE**: The MTS mode in BTC FAPT2 has larger T/P and S/L naturally, in comparison to the Scalper mode, which also makes the former inherently more profitable. But you could always run both modes simultaneously on the same account for increased gains on BTCUSD. Please note that, irrespective of the broker, the T/Ps and S/Ls in BTC FAPT2 are represented in dollars, not pips. So, a T/P of 35 means $35 or 3500 pips (assuming 2 decimal points on BTCUSD's charts)

- **HIGHLY REDUCED DRAWDOWNS :** The trading requirements for Bitcoin are vastly different since BTC/USD has been leaping in prices over the past 2 years. Nevertheless, combining drawdowns from both modes (i.e., Scalper & MTS).

- **TIMEFRAME INDEPENDENT & VARIABLE TRADE TIMINGS:** This is self-explanatory.

- **FORCED CLOSURE OF TRADES AT END OF SESSION:** One of the more interesting features we've added it our FAPTv2.0 robots is the ability to force the robot to close trades on a pair by the End of Session (EOS), which could be either daily, weekly or monthly! This will be explained in detail when we expand on the new ForceCloseAtEOS parameter later in this guide.

- **BTCUSD SPREAD ADDED TO TAKE PROFIT:** This feature had been added to our breakthrough BTC FAPT2 robot that works specifically on Bitcoin (BTC/USD). Since Bitcoin's spreads are notoriously high very often, you have the option to add the current spread to the robot's T/P, so as to allow the robot to compensate for the loss of spreads from its profits.

NOTE: For some parameters, you will notice that the default value is -1. This value means that the robot will internally choose the best, optimum settings to be applied on Bitcoin.

What are the results?

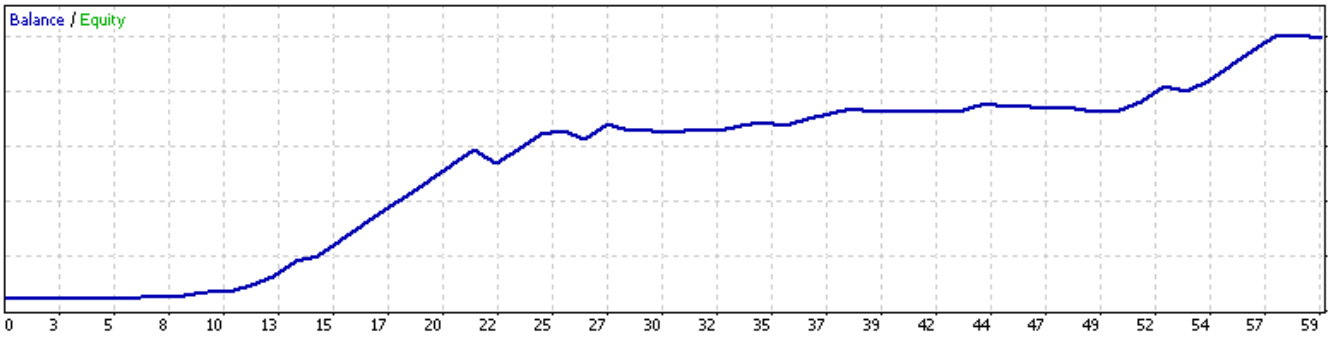
BTC FAPT2 offers some of the best profits you'll ever see on Bitcoin. In the past, the MTS mode outperformed the Scalper, but the reverse has been happening of late. However, both modes can be traded simultaneously for best profits. Just like FAPT2, BTC FAPT2 Premium is also timeframe independent, but it will run on BTCUSD only, no other pair. With MTS, you could run the robot on H1 timeframe or higher and M1 for the scalper, but this is merely to make it easier for you to distinguish which modes are running on which charts. In any case, the BTC FAPT2 mode will also be mentioned by the robot on the charts.

For Bitcoin, we recommend starting with atleast **$1000-$5000** to take full advantage of the blatant upsurge that its main trend has been riding on especially since the year 2013!

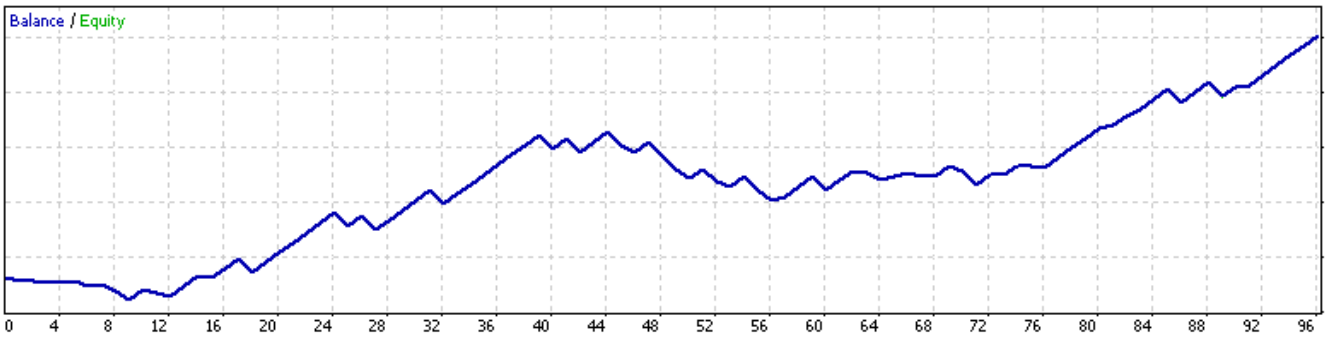
BTC FAPT2 PREMIUM Equity Charts (results from legacy version)

(from Jan '10 to Nov '13)

BITCOIN (BTC/USD) – Medium-Term Strategy (MTS) : Profit = $4,556.15



BITCOIN (BTC/USD) – Scalper Strategy : Profit = $1,981.51



Please note that the above graphs indicate the results of the very first BTC FAPT2 version only, not of the latest BTC FAPT2.3. They have been included here merely for the sake of comparison between the two versions. And as you can clearly see from the performance graphs included earlier in this manual, BTC FAPT2.3 outperforms the older version by a HUGE margin, considering profits from both modes!

What is Bitcoin

Bitcoin is a revolutionary new concept — a digital currency of the new era, not relying on any bank or government, which started few years ago as an open source project on www.bitcoin.org. It was considered by many as just another creation of Internet geeks before it took the financial world by storm this year and was suddenly raised to the ranks of major world currencies. Bitcoin as a concept was invented by a person (or hacker group) nicknamed Satoshi Nakamoto in his/her paper "Bitcoin: A Peer-to-Peer Electronic Cash System", which was, of course, published electronically and is available on the bitcoin.org site for anyone who's interested.

The essence of the entire idea is, as Nakamoto says, "A purely peer-to-peer version of electronic cash would allow online payments to be sent directly from one party to another without going through a financial institution." He points out that since this system runs transaction irreversibly and not through any financial institution, the transaction cost is drastically reduced and trust in the system is improved.

Any two willing parties can perform transaction without any trusted third-party (the distributed network plays a role of the third party). The actual Bitcoin is a file containing the chain of digital signatures of all previous owners. This approach prevents double-spending of any particular coin and eliminates the need of the central system. Any new transaction is broadcasted to all the nodes (peers) and the nodes can check validity of the coin by verifying the previous transactions. This makes counterfeiting essentially impossible. By the way, you can also earn your Bitcoins the "hard way" by helping the system to verify secure transactions. This process is called "mining" and requires a lot of computational power, typically multicore GPU system. The algorithm is designed in such a way that mining becomes more and more complex and less and less profitable with the time. So, mining is not as easy as it used to be when the Bitcoin network first began.

Nowadays, you can use Bitcoin for almost everything: purchase music, software, hosting, video games, betting, auctions like eBay... You can even rent apartments and buy houses using Bitcoin! Nobody expected Bitcoin to gain this much traction, but it is taking over the world faster than you might think.

Since **Bitcoin** is a currency, you can use it in exactly the same way you use any other electronic money: you open a digital wallet that can be installed on your computer or on your mobile phone and you use this wallet to pay or receive money. This is as safe (or maybe even safer) than any other digital wallet, it uses cryptography with public and private keys and all the

nitty-gritty that guarantees security of all your electronic transactions; for example, for credit card payment or home banking.

The advantages of **Bitcoin** stem from the fact that your transactions do not pass through any central office, bank, etc. The transactions take place between two persons and involve the entire network to approve its validity. No banks mean that the cost of transaction is kept very low. On top of that, your account cannot be frozen, it will not depend on failing banks, bad credit history etc. Opening an account does not require any prerequisites. Just your email address is enough.

Moreover, you can trade your bitcoins exactly the same way you can trade euros or dollars and gain money on its rate fluctuations. With more services and brokers opening up to Bitcoin, you can now trade and exchange bitcoins against other currencies or to buy goods or services. This is almost identical to trading regular forex currency pairs, the only difference here. The only market that we focus on when trading Bitcoin is versus the US Dollar, that's BTC/USD. Here is an example of how the BITCOIN chart looks in FxChoice's metatrader (in Tallinex, you will see the pair listed as BTC/USD)

Our BTC FAPT2 robot has been designed to take full advantage of the rising trend in Bitcoin and besides that, it is not limited to going long on BTC/USD. Whenever required, there are times when our robot will go short in order to make gains from temporary dips, so in this way, the robot is advantageous over 'buy and hold' strategies, which is what you would do if you were a long-term speculator or trader on the Bitcoin market.

How to run BTC FAPT2 PREMIUM

The installation process for our BTC FAPT2 Premium is identical to that of FAPT2 Premium. The main thing to remember is to first sign up at **MyFxChoice or Tallinex** (or both) through our links below, with a deposit of at least $1000 or more:

http://fapturbo2.com/myfxchoice

http://fapturbo2.com/tallinex

Once you complete the registration process, you will be given instructions and the links to download the respective **Metatraders (MT4)** from FxChoice and Tallinex. After you've installed the metatrader, you will find our Premium robots listed under the Expert Advisors section in the Navigator window, in this case, you should be looking for BTC FapTurbo2 Premium.

Before moving on to the instructions provided in the next section, you must first ensure that you have registered your live FxChoice or Tallinex account# in the License Management page of your FapTurbo2 Members Area. This has been explained in detail in the main FAPT2 guide, so please be sure to read and follow the instructions from there.

Essentially, you will need to login to the FAPT2 Members Area, go to the License Management page and type in your live account# into the relevant textbox, and finally, click Save to register your live account#. Once it has been activated, you can move on to the next chapter.

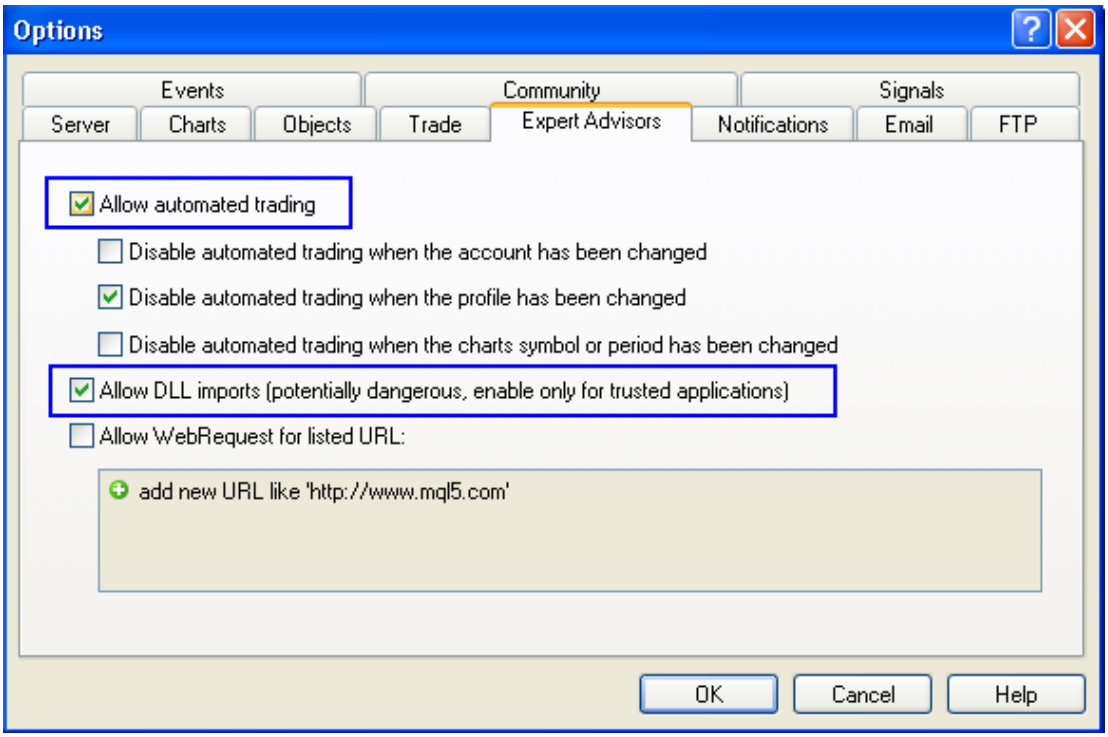
If you face any issues registering either of your live account#s, just email us (premium@fapturbo2.com) with your new account# and we'll update it for you.

Attaching BTC FAPT2 to the chart

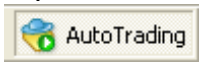
This process is similar to what has been described in our main FAPT2 Premium, but we have included it here once again for your convenience. First of all, you should set the correct global settings in your Metatrader4 platform.

Click **Tools** in main menu - > **Options** - > **Expert Advisors** Tab

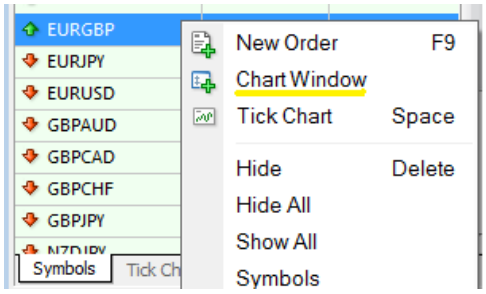
Make sure you have the same settings as shown on the screenshot below. **Allow Automated trading** checkbox must be checked and **Allow DLL imports** must be checked too.



Then click OK to close the window. Now, make sure the «**Auto Trading**» button on the top of Metatrader4 is ON, in the “pushed” position. When it is turned ON to allow Expert Advisor trading, it will have a green triangle showing, like this:



The next thing to do is to open a BITCOIN or BTC/USD chart. If you don’t see Bitcoin listed on the left within the Market Watch window, simply right-click and choose the option ‘Show All’. Once you do so, you’ll see BITCOIN listed and you can then open a chart by right-clicking on BITCOIN

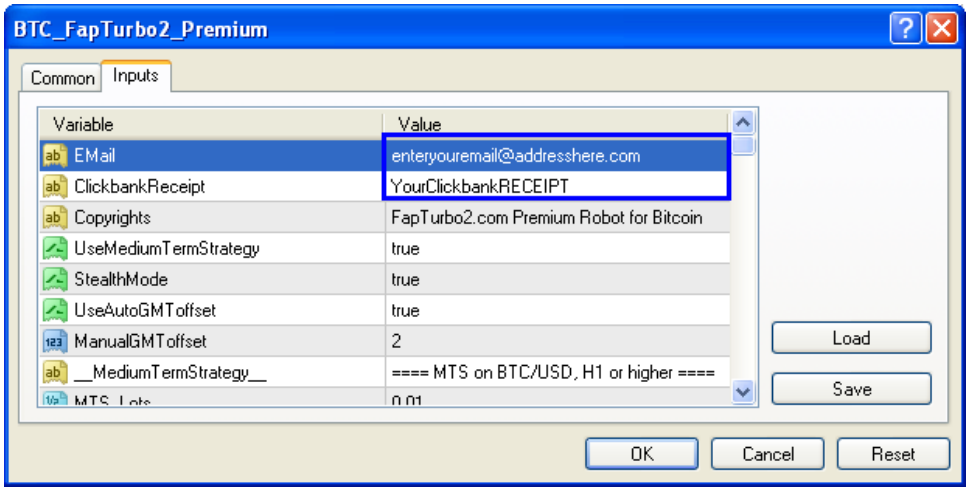


within Market Watch and then click **Chart Window** (as show on the right). Or you could simply click the **New Chart** button on the metatrader toolbar and then choose BITCOIN from the list to open a new chart of the same.

Once that's done, if you wish, you can switch the timeframe (although it is not critical). For the default Medium-Term Strategy (MTS) mode, the timeframe of the Bitcoin chart may be set to H1 or higher, so that you can easily distinguish the MTS chart from the Scalper one. To switch timeframes, you can click your timeframe selection in the toolbar at the top of Metatrader4. If you are running the Scalper strategy (UseMediumTermStrategy=false), then it's best if you switch to M1 timeframe. On Tallinex, you can select BTC/USD, H1 or M1 respectively.

We now need to run BTC FAPT2 Premium on the relevant chart. You will have to first open a BITCOIN chart and then drag & drop the robot BTC_FapTurbo2_Premium onto the chart, like this:

The "**Settings**" Window will appear. Now it's time to authenticate your copy of BTC Premium EA. All you need to do is click the Inputs tab and enter your registered Email Address along with the correct Clickbank Receipt# of your FapTurbo2 purchase. You can find your CB receipt# in the email that Clickbank sent you as soon as you completed your purchase.



Then click "OK" to run the robot. If you set either robot correctly on the proper currency pair (timeframe is not critical for either mode), you will see a smiling face in the top right corner of the Chart window. This means that the Expert Advisor is working and monitoring the market.

Note: By default, the BTC FAPT2 robot runs on MTS mode. To enable the scalper in BTC FAPT2, the **UseMediumTermStrategy** parameter must be set to FALSE, otherwise the robot will assume the default mode of Medium-Term trading.

Medium-Term Strategy (MTS)

AND for Scalper Mode

Please keep in mind that you must be patient with BTC FAPT2 Premium robot especially when it is trading in MTS mode; it will not trade often but the aim is to make quality trades. The

robot is always monitoring the market and opens its trades only when it sees conditions which indicate a high probability of success.

BTC FAPTURBO2 Premium will open trades when its internal indicators find the proper market conditions to open trades. The robots do not have to open many trades or trade every single day! The goal is to make a profit, not to make many trades!

If you followed the steps correctly but if the robot has not opened a single trade for the last 10 days, then you should contact our support team (premium@fapturbo2.com) for help and assistance.

Forex Brokers are closed on Saturdays and Sundays: Even the open Bitcoin market is active during weekends, no trades will be performed by our robots during the weekend. There is no need to turn off BTC FAPTURBO2 Premium during the weekend. It will sleep and continue to trade as soon as the broker is open again.

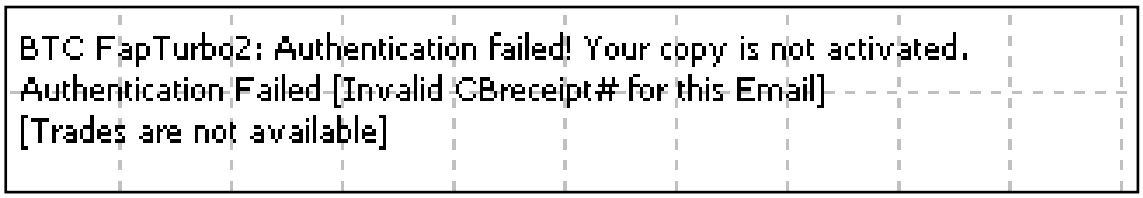
After you click OK, BTC FapTurbo2 will validate your Email and CB Receipt, and if it is a valid purchase, then you should see the successful Authentication results as shown in the previous screenshots:

Note: If you don't see the above 'successful Authentication' messages right away, that could mean one of several things:

- Check the parameter PrintLogOnChart (at the bottom of the parameters list) and make sure that it is set to True.
- Today is a non-trading day (weekend or Friday night, for example). Wait 2 days for this alert to appear. You cannot activate or run BTC FapTurbo2Premium during the weekend.
- You forgot to set the correct parameters, for example "Allow DLL imports" in EA settings. Check the previous steps carefully.

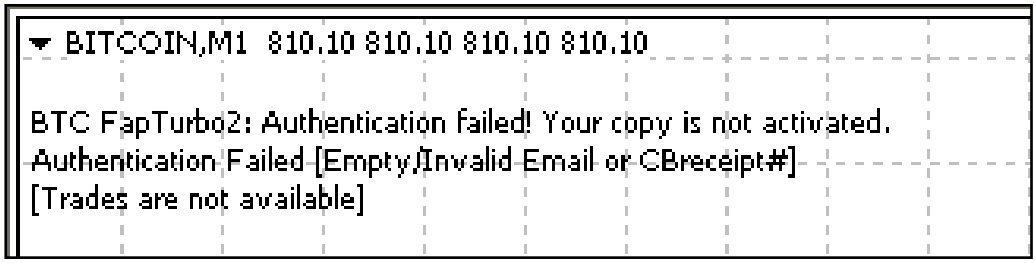
If the validation of your Email Address or Clickbank Receipt# fails, then you will see the error "**Authentication Failed [Wrong E-Mail or ClickbankReceipt]**" in the Experts/Journal tab as well as on the chart, like below. In such a case, please make sure that you've entered your Email Address and CB receipt correctly, without any typos or errors.

BTC FapTurbo2: Authentication failed! Your copy is not activated.
Authentication Failed [Incorrect Email]
[Trades are not available]



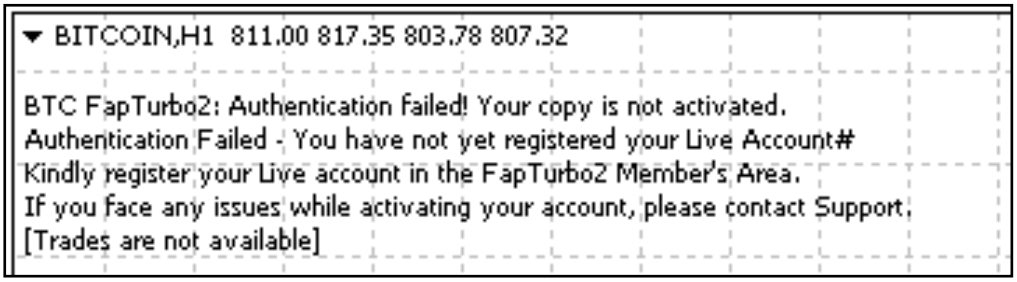
BTC FapTurbo2: Authentication failed! Your copy is not activated.
Authentication Failed [Invalid CBreceipt# for this Email]
[Trades are not available]

If you happen to completely forget to type in your Email Address or CB receipt#, then you will see this message instead:



BITCOIN,M1 810.10 810.10 810.10 810.10
BTC FapTurbo2: Authentication failed! Your copy is not activated.
Authentication Failed [Empty/Invalid Email or CBreceipt#]
[Trades are not available]

If you're running FapTurbo2 on your Live account for the first time, then you must register your Live account# in the Member's Area so that it will be activated for BTC FapTurbo2, otherwise you will receive the error below:



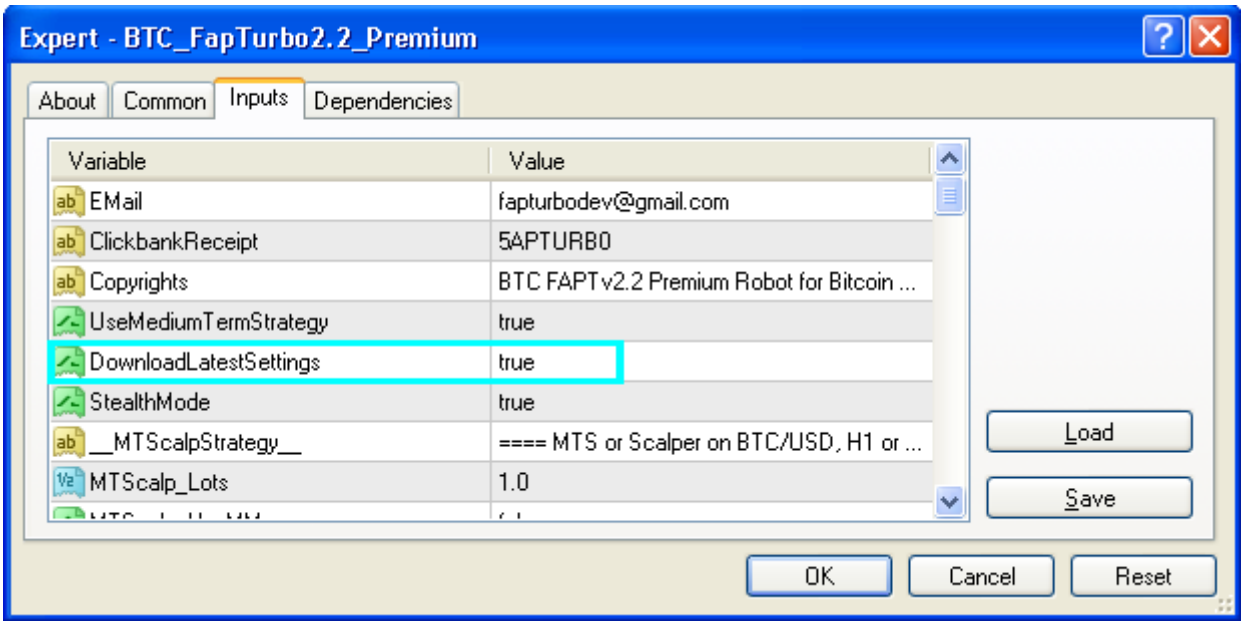
BITCOIN,H1 811.00 817.35 803.78 807.32
BTC FapTurbo2: Authentication failed! Your copy is not activated.
Authentication Failed - You have not yet registered your Live Account#
Kindly register your Live account in the FapTurbo2 Member's Area.
If you face any issues while activating your account, please contact Support.
[Trades are not available]

In order to register your Live account, please login to your FapTurbo2 Member's Area, click Downloads and scroll down until you find the FapTurbo2 activation section below. Clicking Edit will take you to the License Management page where you can register and activate your Live accounts as described in Step #3.

If you face any issues while attempting to register your Live account, please feel free to contact our Support department here: premium@fapturbo2.com

Download Latest Settings

This automatic feature has been made available since BTC & FAPTv2.2 and we have already explained it in detail in our main FAPTv2.3 manual, so please do take the time to read through the main guide carefully. As many of our existing FAPT2 members already know, we have found it to be advantageous to regularly update our robots with better, optimized presets in order to stay in tune with the changing markets in the Forex world, even more so when it comes to Bitcoin. To that end, **DownloadLatestSettings** makes it convenient for our BTC & FAPT robots to automatically download the latest optimized settings from our servers and apply them. Make sure this parameter is True as shown below:



Regardless of whether you choose to run with the latest MTS or Scalper settings, you always have the flexibility to manually change or modify the robot's settings as you wish. Just like how it has been in the previous FAPT2 versions, for any parameter value with the default value -1, it means that the robot will internally apply the best value for each parameter based on that pair; the difference in this version is that the best value chosen by the robot will depend on which mode is being used, which again comes back to DownloadLatestSettings. So, if DownloadLatestMTSsettings is true, the robot will apply the best MTS values (that were downloaded) to every -1 parameter. If false, then hard-coded older values will be applied instead. We hope you're getting the hang of how this version behaves now. Irrespective of the mode, you can experiment with any of the parameters... and if you ever get lost and wish to revert the robot to its default behaviour, simply change the relevant parameters back to -1.

BTC FAPT2 PARAMETERS

MEDIUM-TERM STRATEGY SETTINGS

As mentioned earlier, the robot runs on Medium-term Strategy by default (UseScalperStrategy = TRUE). Many of the important parameters are similar to the ones in our main FAPT2 version. You can read about all the parameters from the main FAPT2 guide. But for now, here's a quick summary of the important MTS settings in BTC FapTurbo2 Premium:

- **MTScalp_ForceCloseAtEOS** – This is an interesting parameter we added in the very first BTC and FAPT2 Premium versions. You can set this parameter in such a way that it will force the robot to close trades on the pair by the End of Session, which is defined as either Daily (1), Weekly (2) or Monthly (3). If you set it to 0, the robot will allow trades to exist for as long as possible without being forced to close. But if, for example, you set ForceCloseAtEOS to 1, then the robot will force any existing pair on the pair to close by the end of the day's session for that specific pair (which is defined by MTScalp_EndWorkTimeHour and MTScalp_EndSessionMinute). If set to 2, the robot will force trades to close by the End of Week (i.e., 5 mins before the end of trading on Friday every week). We have found weekly closure to be profitable across most pairs, including Bitcoin! And if you set ForceCloseAtEOS to 3, then all trades on a pair will be closed at the beginning of each month (first trading day of each month). You can test this parameter for yourself, if you'd like to play around with it. But if you ever get confused, just leave it at its default value of -1.

- **MTScalp_ReverseTrade** – By default, the strategy usually trades in a counter-trend style. By setting this parameter to 1, then FapTurbo2 will open a trade opposite to its normal signal and you can force the robot to trade along the direction of the current trend, which seems to suit certain pairs better. Strongly not recommended for beginners.

- **TRADE T/P and S/L** : This set of parameters is self-explanatory. Each mode has its own optimized Take Profit and Stop Loss values, and have been named accordingly, i.e., MTScalp_TakeProfit or MTScalp_StopLoss. Please remember that, irrespective of the broker, the T/Ps and S/Ls in BTC FAPT2 are represented in dollars, not pips. So, a T/P of 35 means $35 or 3500 pips (assuming 2 decimal points on BTCUSD's charts)

- **MTScalp_AddSpreadToTP** : This is another parameter we added especially for BTC FAPT2 Premium. As explained earlier, the instantaneous spreads on the BITCOIN (BTC/USD) markets can be quite high very often, and they also fluctuate wildly, especially during periods of high volatility. This is quite normal of the Bitcoin markets and is expected across any broker that offers Bitcoin for trading. Incase the current spread is within the MaxSpread range, the BTC FAPT2 robot will allow trades. However, you may find that a great chunk of the robot's profitable trades are negated by the high spreads at the moment at which those trades were opened. So, in order to compensate for such spread losses, we added this feature. By setting **AddSpreadToTP** to True, the robot will remember the spread at the time at the trade was opened and will compensate for it by adding that spread to the T/P for that mode.

- **BREAKEVEN or TRAILING STOP and MTScalp_BEorTSOffset:** The parameter MTScalp_BreakevenOrTrailingStop allows you to implement either the Breakeven OR Trailing Stop feature (you cannot use both together). Once you switch on either feature, the robot will activate it based on the offset from the trade's entry (in pips) which you should specify in the related parameter **MTScalp_BEorTSOffset**. Please note the values for MTScalp_BreakevenOrTrailingStop below:

  - **MTScalp_BreakevenOrTrailingStop = 0** (OFF)
  - **MTScalp_BreakevenOrTrailingStop = 1** (BreakEven): BreakEven (BE) allows the robot to save profitable trades from falling into a loss by setting the S/L to the trade's entry level as soon as the market price crosses the BreakEven offset (which you will specify in the MTScalp_BEorTSOffset parameter)

- **MTScalp_BreakevenOrTrailingStop = 2** (TrailingStop) : A Trailing Stop (T/S) is simply a dynamic S/L that will follow or 'trail' the market price. This allows you to capture as many pips possible even if the market price were to turn against a favorable trade. The T/S will remain dormant until the trade's Profit crosses the offset you specify in MTScalp_BEorTSOffset

MTScalp_BEorTSOffset is related to the Breakeven/TrailingStop feature mentioned above. You can simply specify the Offset (i.e., a certain profit level in pips) at which the BreakEven or TrailingStop feature will be activated. In **BreakEven**: as soon as a trade reaches this profit level, the S/L of the trade will be moved to the trade's entry level (including the spread), which is essentially breakeven. For e.g., if you have a BTCUSD trade that is currently in profit and it looks like it may gain more, so you don't wish to close it just yet... just set MTScalp_BEorTSOffset to a value like $5 (which is equivalent to 500 points on the BTCUSD chart). As soon as your trade touches the $5 pip profit level, the trade's S/L will be moved to breakeven immediately, thereby ensuring that you will not lose even if the immediate trend were to turn against you.

In contrast, a **TrailingStop** causes the trade's S/L to drag behind or follow the market price, depending on the TrailingStop offset (the value you specified in MTScalp_BEorTSOffset). For eg., if the same BTCUSD trade mentioned above moves beyond the TS offset, then the robot will first activate the TS by setting the S/L to breakeven, after which if the market price were to move further up in profit, the S/L will move along with it, but always keeping a distance of the TSoffset pips behind the current price.

OTHERS / MISCELLANEOUS

- **MaxSpread** – Default is -1, which means the robot will choose the best MaxSpread based on the broker. But you can also explicitly define the maximum spread at which you would like BTC FAPTURBO2 to trade. For BTCUSD, it's advantageous to stay within a MaxSpread of $10 (that's 1000 pips). However, if you wish to experiment with this setting, then you could increase it further for the Medium-Term Strategy, but it is not recommended to do so for the Scalper mode.
- **MTS/Scalp ExpertComment & MagicNumber** – Just like FAPTv2.3 Premium, BTCv2.3 will automatically add the required corresponding suffix (MTS or Scalp) to the default ExpertComment 'BTCPrem2.3', based on which mode you are

running. E.g., for MTS mode, the ExpertComment will become BTCPrem2.3MTS and for the Scalper, it will be BTCPrem2.3Scalp. This will help you to be able to differentiate MTS trades from the Scalper ones (to see the ExpertComment and MagicNumber of a trade, simply hover your mouse over that order listed in the Trades tab or right-click the header and select Comments)

- Similarly for the **MagicNumber** (this helps the robot to identify its own trades from other robots), BTCv2.3 will automatically increment the MTScalp_MagicNumber if you are running in Scalper mode. For e.g., if the MTS MagicNumber is 20140901, then the Scalper's MagicNumber will be 20140902. If you ever need to confirm the MagicNumber being used by the robot in a particular mode on a certain chart, just set WriteDebugLog to true and you will find this additional detail on the chart as shown below:

Num of Open trades on BTCUSD = 0
Stealth=true, ReverseTrade=false, T/P=$80.00, S/L=$160.00
MM=false, Fixed LotSize=1.00
Current Spread: 541 pips, MaxSpread:
MagicNumber=20140901
Broker Time: 2014.11.05 08:44 Wednesday
GMT Time : 2014.11.05 06:44 Wednesday
Gmt Offset : 2.0 (automatic)
Active Time: 8:30 to 23:30 (GMT)
ForceCloseAtEOS=3
BROKER INFORMATION

SCALPER STRATEGY

To activate Scalper Strategy you should set **UseMediumTermStrategy = FALSE** parameter in BTC FAPTURBO2's settings. Everything else in this mode is very similar to the parameters in the MTS mode, so they will not be explained further here. For a detailed explanation of each parameter, please be sure to read the main FAPT2 Premium manual once again.

IMPORTANT POINTS TO REMEMBER

1. BITCOIN or BTC/USD is a market where you can trade the virtual crypto-currency Bitcoin versus the US Dollar. The fundamentals that drive this pair are different from what you may be used to seeing with other regular forex pairs, but technical analysis may be applied to it like on a regular pair.

2. The Bitcoin pair is on an overall uptrend at the moment and has been increasing in value by leaps and bounds ever since the beginning of 2013.

3. You might find that the bitcoin market is generally open to trading even during weekends, but when it comes to regular forex brokers, no trading is allowed over weekends. This is a limitation by the brokers; hence, our BTC FAPT2 Premium will not trade on BTC/USD during the weekends.

4. Very often, you will see that the Spreads on Bitcoin can be very high, but this is well-taken care of by our robot with the MaxSpread and AddSpreadToTP parameters.

5. Please remember that, irrespective of the broker, parameters that are related to price in BTC FAPT2 such as T/Ps , S/Ls, MaxSpread and Slippage are represented in dollars, not pips. As you will see on FxChoice and Tallinex, **Bitcoin prices are expressed in 2 decimal digit values**. Therefore, a movement of $1.00 is equivalent to 100 pips.
